

Mark M. Turner - Global Energy Group - Research Scientist / Innovator

Mark M. Turner, American Inventor and founder of [Green Group Alliance Members](#), is the CEO of Global Energy Group P744 Worldwide Inc. and managing member of his other corporation GEG Consulting & Developing International, LLC.

Mark's ideas are multifaceted in the fields of electromagnetics and chemical formulations. His problem solving abilities have been used extensively with members in this group and with other close inventor friends of his. He is known by his friends as "The Professor" taught by the School of thought and imagination.

Mr. Turner, whose degree is in refrigeration mechanical engineering, owned and operated a very successful refrigeration business for many years. He was the first refrigeration specialist to install and repair the Hoshizaki Ice Machines in South Florida for Duffy's Draft Houses in the early 1980's.

Mr. Turner has been an independent research scientist for over 25 years. While he was originally in the field of refrigeration engineering, after a severe industrial accident in the mid 1990's he turned his interests to research and development in the fields of Health and Electrical Magnetic Energy. Mr. Turner is self-taught in bio-chemistry, quantum physics, applied science, Versor algebra, and Magnetic Momentum Mathematics which he developed. He has an extensive background in research for nutritional supplements and how to apply them for healthy aging and longevity. His theory is that all illnesses and diseases come from *mal-absorption* bowel syndrome and the lack of nutrient up-take which is an aging accelerator. He has extensive back ground knowledge in the fields of Energy Reclamation in working with **Eugene Franklin Mallove** (June 9, 1947 – May 14, 2004) who was a scientist, science writer, editor, and publisher of [Infinite Energy](#) magazine, and founder of the non-profit organization New Energy Foundation. He was a strong proponent of [cold fusion](#), and a supporter of its research and related exploratory alternative energy topics, several of which are characterized as "[fringe science](#)." Mallove authored [Fire From Ice](#), a book detailing the 1989 report of table-top cold fusion from [Stanley Pons](#) and [Martin Fleischmann](#) at the [University of Utah](#). Among other things, the book advances a [conspiracy theory](#), claiming that the team did produce "greater-than-unity" output energy in an experiment successfully replicated on several occasions, but the results were suppressed through an organized campaign of ridicule from mainstream physicists, including those studying [controlled thermonuclear fusion](#), trying to protect their research and funding. Mallove was murdered in 2004 while cleaning out his former childhood home, which had been rented out. Three people were arrested and charged in connection with the killing. The first trial resulted in a guilty plea to manslaughter in April, 2012,

Mr. Turner has specialized in developing electromagnetic field generators. Since the late 1990's Mark's team has been working on DC motors and how they relate to becoming Power production systems through various old technologies that employ AC to DC through set ups like alternators and electronics, and magnetic pulse direct/drivers to develop ADV voltage, and ADC current where both systems work together through DC motors or without the use of any motors to create a Load Compensating Electrical Fuel Cell being powered by AC sources without invertors. He built the *Genesis* machine and has been sleeping in its predetermined magnetic DC pulse generated fields for over 8 years now with great success in regards to improving his own health, and the health of others who have used his devices. Another area of interest that Mark has is in developing his own machines for making various liquids like Colloidal silver which has been tested for its stability and micron count of .04 micron for dissipation and used in nebulization therapy. In his interest in health and healing the human body, Mark studied and worked on his own version of Reactive Molecules in late 1990's knowing they were a key to correcting the body's own system, but he was unable to stabilize them completely. His chemical back ground enabled him to develop fuel additives for increased MPG's and lower carbon emissions by over 40% in some tests, and ceramic oil additives which were tested and verified as to their efficiency at Lincoln College in the early 2000's.

Mark has consulted privately on various medical and aeronautical space projects and has several liquid and technical magnetic inventions to his credit. He has worked on the development of magnetic coil energy generators to free up all power needs to eliminate fossil fuel usage, and most recently been developing the load compensating electrical fuel cell. This fuel cell has the capacity to reduce and or completely eliminate the need for outside electrical power systems from power plants.

Mark believes that **Albert Einstein** put it the best when he said “**We cannot let the minds of those who have created the problems in the world to be the same minds to have the solutions.**” While the many who have earned Ph D’s and other high degrees of learning have obtained great accomplishments, without an imagination and a way to apply it through extensive research the future of all cutting edge power development will be lost.
